

Life Cycle of a Mosquito

Most mosquitos lay their eggs directly into water.
Others lay their eggs near bodies of water but
not within them

Eggs will hatch into larvae within 24 to 48 hours

How long does a mosquito live?

On average a mosquitos life span is typicall 2-3 weeks.
However, for the lucky mosquitos who can find a safe
hideout for the winter such as a garage, culvert or an
attic have a chance of living for months.
